

New Generation of TODO-MATIC® Hose Unit

TODO® is proud to present our latest hose unit for the safe transfer of aggressive chemicals and gasses. The unit offers advanced design and performance features not previously achievable and will be available in both TODO-MATIC® and TODO-GAS® variants.

The hose unit is fully interchangeable with all previous and current TODO-MATIC® and TODO-GAS® tank units as well as products conforming to the N.A.T.O. standard STANAG 3756 dimensional specifications.

The hose unit offers the following features and benefits

- Improved ease of connection against pressure.
- New twin ball race swivel offers increased strength and reduced torque force in operation.
- A reduction from four to two elastomeric seals offers cost and maintenance savings, particularly when using High Specification Perfluoroelastomer (FFKM) seals.
- Reduced residual liquid on disconnection.
- Fully connected locking facility eliminates unintentional disconnection when subjected to vibration from transfer pumps.

The hose unit from TODO® is available in stainless steel 316L with a full complement of flange / threaded connections and choice of elastomeric seals.

If you are interested in the TODO-MATIC® couplings please call Tel +46 506 19940 or e-mail assist@todo.se. To find out more about TODO and our products please visit our website at www.todo.se.
