

# New Generation of TODO-MATIC® Tank Unit

TODO® is proud to present the latest generation tank unit for the safe transfer of aggressive chemicals and gasses. The tank unit uses flow optimised internal components with taper valve seating offering low pressure drop performance and additional security.

A new piston stem arrangement allows close fitting to associated valves without interference. Unlike other designs in the market, the piston support structure is fully secured to prevent dislocation in high flow or viscous product transfer.

The tank unit will offer the following features and benefits

- Taper valve seating
- Flow optimized
- Non projecting piston spindle
- Fully secured piston support

The tank unit from TODO® is available in stainless steel 316L with a full complement of flange / threaded connections and choice of elastomeric seals.

If you are interested in the TODO-MATIC® couplings please call Tel +46 506 19940 or e-mail [assist@todo.se](mailto:assist@todo.se). To find out more about TODO and our products please visit our website at [www.todo.se](http://www.todo.se).
